

YOUR KITTEN'S FIRST 15 MONTHS

It's a big world for your little furry friend. Here's what to expect over the first year, and stay subscribed to our emails for more resources and milestones in the future.

Months 1-3

WELCOME TO THE WORLD, KITTEN!

Time to start weaning them onto kitten food. Make sure you update microchip details with your local shelter. Finally, take your kitten to the vet for a checkup and vaccination.

GETTING TO KNOW YOU

Start socializing your kitten with other pets and people, and getting your kitten used to wearing a collar.

LET'S GET PHYSICAL

Your kitten will need more vaccinations, which is a great time to talk to your vet about worm prevention. Don't forget to help your kitten get used to grooming and handling.

Months 4-6

BUILDING GOOD HABITS

Continue to socialize your kitten, and ask your vet about flea control products.

TIME TO HAVE "THE TALK"

Talk to your vet about spaying or neutering your kitten.

SMILE!

Your kitten may have lost all baby teeth by now and have a full set of adult teeth.

Months 9-15

THEY GROW UP SO FAST

Kittens will appear fully grown, but they still need to be fed a special kitten food.

HAPPY FIRST BIRTHDAY, KITTEN!

Your kitten is now considered an adult cat, so ask your vet about transitioning to adult food.

FOLLOWING UP

Visit your vet for your first annual adult cat checkup and vaccinations.
